

Environmental programme of Rally Český Krumlov

The organizers of the Rally Český Krumlov from the ÚAMK Automotoklub Rallye Český Krumlov and ČK motorsport have been working from the beginning of the preparation with the knowledge that it is necessary to ensure this event in such a way that it causes minimal damage to society and the environment.

Therefore, the organizing team has placed the concern for the environment and optimization of general safety at the top of the priorities of the Rally Český Krumlov.

The organisers emphasise an all-round ecological approach, with the need to awaken awareness of ecological aspects in both the participants and especially in the rally fans.

At first glance, motorsport does not seem to be environmentally friendly. But this may not always be the case. Both the international automobile federation, the FIA, and car manufacturers are devoting considerable resources to the development and design of environmentally friendly cars, new fuels and technologies that reduce carbon dioxide emissions from mass-produced cars, as well as reducing fuel consumption. Motorsport is also looking at replacing fossil fuels with alternative energy sources such as biogas, electricity and others.

The organisers of the Český Krumlov Rally are also trying to contribute to the development of environmentally friendly motorsport. During the Czech New Energies Rally Český Krumlov, everyone can get acquainted with new cars that are powered either purely by electricity or at least in combination with an internal combustion engine. So a hybrid system. Most of the world's carmakers have already introduced one of the two systems into series operation.

Motorsport is making advances in technology in particular. We believe that rally sport can also be enriched by "greener" traffic in other ways. It is possible to influence the attitudes of consumer-fans so that if environmentally friendly technologies are used in the production of rally cars, these can then quickly become commonplace in everyday traffic for ordinary consumers.

The organisers of the Český Krumlov Rally are committed to:

- to educate their own members and all volunteers involved in the organisation of the rally in the field of the environment;
- to focus on minimizing the amount of waste from the event and to take care of recycling, both from the stages and from the service areas;
- favour environmentally friendly and reusable materials in the construction and design of the security of the stages;
- strive to minimise the use of private cars, with an appeal to car occupancy and, in cities, the use of public transport to transport fans;
- the use of environmentally friendly fuels and cars;
- demanding environmentally friendly solutions from service providers;
- limiting the number of photocopies at the organisation and press centres.

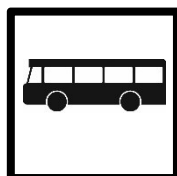

At the stages, the organisers will encourage spectators to be environmentally friendly. Collection of litter from spectators as well as teams, competitors (oil, fuel, water). Special attention will also be paid to waste sorting for recycling of used materials during the construction of stages and other sites of the Rally Český Krumlov.

Respect the residents
and their environment

Take an organic
approach responsible
approach

Use public transport
and take the strain off
your cars

Do not pollute the
water and save water

Separate your
waste

Use waste bins

Don't go on
forest roads

Don't park in
the woods

In our forests:

No smoking

Prohibition of
lighting fires

Prohibition of
forest pollution

No camping

Organisers of the Český Krumlov Rally get involved in forest restoration on the territory managed by the forests of the Czech Republic.
